

NISHANT RAGHAV

Senior Software Engineer | Full-Stack (React / Node.js / Python / Go) | Applied GenAI (RAG)

+91-7982970843 • rag.nishant006@gmail.com • LinkedIn • GitHub • LeetCode

SUMMARY

Senior Software Engineer with 6+ years of building large-scale web applications across telecom, OTT streaming, and enterprise platforms, including frontends serving 2M+ monthly users with 90+ PageSpeed scores. Deep expertise in React/Next.js and type-safe full-stack development (Node.js, Python), with production experience shipping Retrieval-Augmented Generation (RAG) systems. Proven track record mentoring engineers and driving architectural decisions across cross-functional teams.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES2023), Python, Java, Go, SQL

Frontend: React, Next.js 15 (App Router, RSC), Angular, Redux, Zustand, React Query, TailwindCSS, Highcharts

Backend & APIs: Node.js, Express, NestJS, FastAPI, Spring Boot, REST, GraphQL, oRPC + Zod (contract-first)

AI / LLM: RAG pipelines, LangChain, LangGraph, Hugging Face, embeddings, pgvector, Pinecone

Cloud & Data: AWS, GCP, Azure, Docker, Kubernetes, DynamoDB, RDS, MongoDB, Firebase

Quality & Delivery: Vitest, Jest, React Testing Library, Cypress, MSW, GitHub Actions, Jenkins, SonarCloud, Turborepo

PROFESSIONAL EXPERIENCE

Senior Developer III

Mar 2026 – Present

Wipro — Gurugram, India | Client: Odido

- **Self-service platform:** Built customer-facing self-service journeys for Odido (the Netherlands' leading telecom, formerly T-Mobile NL) using TanStack and React Server Components, enabling subscribers to independently manage mobile plans, eSIMs, and home-internet hardware—cutting routine agent interactions by 35%.
- **Performance:** Optimized rendering and bundle strategy (server components, code-splitting, streaming) to raise PageSpeed Insights scores 90+ across all metrics, on flows serving 2M+ monthly active users.
- **Architecture:** Engineered features in a domain-driven Turborepo monorepo, standardizing state across server (React Query), session, and URL layers—reducing hydration defects to near-zero and cutting new-feature scaffolding time by 50% across three brand front-ends (Odido, Ben, Simpel).
- **Type-safe APIs:** Implemented contract-first APIs with oRPC + Zod between the Next.js frontend and NestJS microservices, eliminating an entire class of frontend–backend integration bugs.

- **Quality:** Drove test coverage to 80%+ with Vitest + React Testing Library (fake timers, MSW mocking), reducing escaped defects per release; enforced Biome linting and CI type-checking across the toolchain.
- **Reusable components:** Shipped CMS-driven (Storyblok) component library adopted by 5 teams/brands, cutting content-to-production turnaround from 3 to 1 day.

Senior Software Engineer

Feb 2022 – Mar 2026

EPAM Systems — Gurugram, India | Clients: Metrolinx, Schneider Electric, Sequoia Capital, Novartis

- **Generative AI (Schneider Electric):** Designed and shipped a production RAG system for intelligent asset search — document chunking, embedding generation, vector indexing, and LLM prompt orchestration — delivering accurate, context-aware answers over large unstructured datasets.
- **Frontend:** Built responsive, accessible (WCAG) UIs and interactive analytics dashboards with Next.js, Angular, Highcharts, Qlik Sense, and Power BI, integrated with headless CMS content pipelines.
- **Backend:** Developed scalable services in Express, FastAPI, and Spring Boot spanning API design, middleware, security, caching, and distributed microservice architecture with monitoring and reliability built in.
- **Performance:** Reduced application load times by 53% (3s → 1.4s) through client-side to server-side rendering migration, route-based lazy loading, and a modular component workflow.
- **Testing & collaboration:** Wrote unit, snapshot, and integration test suites (Jest, Vitest, Testing Library); partnered with designers on flows, flagged issues early, and estimated story points for sprint planning.

Software Engineer

Feb 2020 – Dec 2021

NexGen IoT Solutions — Gurugram, India | Clients: Hoichoi, Aha (OTT streaming)

- **OTT platforms:** Built subscription flows, payment-gateway integrations, adaptive streaming UIs, and analytics/auditing tooling for OTT platforms serving regional-language audiences at scale.
- **Backend & architecture:** Designed and scaled backend services handling client traffic, cache invalidation, cron jobs, and routing; drafted system architecture aligned to customer specs and modern web standards.
- **Leadership:** Led projects and managed the engineering team — sprint planning, demos, timelines, pull-request reviews, documentation, and flow diagrams; monitored production loads and logs.
- **Quality:** Authored unit, snapshot, integration, and E2E tests (Jest, Enzyme); resolved regressions and shipped regular fixes, features, and enhancements.

EDUCATION

Bachelor of Engineering (B.Eng.), ME | University of Huddersfield, United Kingdom
